

ASBESTOS CONSULTING SERVICES

CLIENT: Large University Hospital

LOCATION: Chicago, Illinois

Highlights: Facility Inspection, Sampling, Analysis, Management Planning, Project Design, Project Management, Air Sampling

Environmental Services, Inc. (ESI) has been the primary provider of asbestos consulting services for this client for over thirteen years. Initially, the 1.3 million square foot complex was inspected for suspect regulated asbestos-containing materials (ACM). Samples were collected and analyzed. A management plan was developed, including AutoCAD drawings delineating sample locations and homogeneous ACM areas. This document has been a critical tool in planning renovation projects.

ESI's project designs take into account key client issues. These include dust minimization and control, immuno-compromised patients and after-hour shifts to accommodate staff critical functions.

Project management provides critical coordination with hospital staff, the general contractor and other trades to assure a safe environment during renovation projects.
