

Environmental Health Management in Schools

Application: Public and Private Education and Support Facilities

- Goals:**
1. Maintain a healthy environment for students, staff, and visitors
 2. Perform monitoring and testing to identify issues and confirm healthy conditions
 3. Design and manage renovation, abatement, and other associated projects
 4. Select replacement materials and finishes that perform and minimize environmental impacts
 5. Execute compliant economical projects within budget and schedule

ESI provides on-going assistance to many educational facilities and districts to maintain health and safe buildings. By taking a comprehensive engineering approach, we assist our clients and develop projects that are comprehensive and seamlessly executed. Our architectural and engineering expertise is the foundation for our unique hygiene and environmental project and program successes. Some of our routine services for educational facilities include:

- Indoor air quality monitoring and consulting
- Asbestos materials abatement and replacement
- Underground storage tank removal and replacement
- Management and removal of chemicals
- Drinking water
- Inspection and Management Planning
- Flooring replacement
- Replacement materials consulting
- Soils testing and remediation
- Staff training
- Hazardous materials spill response
- Infection control
- Planning and programming
